SPIGOT RINGS FOR ALLOY WHEELS

Material: Polycarbonate (PC) - is a polymer, which distinguished by its extremely high impact resistance, even at low temperatures, mechanical strength, good dielectric properties, etc.

Package: 4 pcs.
transparent PP bag with euro hanger

Why you should use spigot rings?

Do you have vibration problems on your newly balanced after market wheels? No problem, we have a solution! Improve the fitment & balance of your aftermarket wheels with hub centric rings!

Spigot Rings or Alloy Wheel Hub Centric Rings are designed to fill in the gap between the hub of the car and the center bore of the wheel. Most wheel manufacturers design their wheels with a centerbore large enough to fit on most cars. Therefore, since wheel manufactures make their center bore large enough to fit most cars, most wheel fitments have a gap between the hub and the centerbore.

This gap usually doesn't allow for the wheel to fit hubcentric but rather lugcentric which causes vibration. Therefore, to fill the gap and ensure the fitment is hubcentric, hub rings are used.

Alloy Wheel Spigot Rings are used to ensure that an alloy wheel is centred correctly on a hub of a vehicle. This is very important to ensure that your alloy wheels are safe and secure.

It is dangerous to use alloy wheels which do not have the correct Spigot Rings specified for your car.

Our hub centric rings are made of high quality Poly Carbon. The Poly Carbon material acts like spigot ring eliminating corrosion which is a common problem with aluminum hub centric rings.
